

Graduate course

Experimental Engineering Mechanics

September 10th & 11th, 2018

**Mechanics of Materials
Department of Mechanical Engineering
Eindhoven University of Technology**

General

To design better materials and systems, the mechanical behavior of the material or system in an application, such as damage or failure, needs to be coupled to the deformation of its (micro-)structure in order to elucidate the underlying physical deformation mechanisms. To this end, experimental mechanics seeks to study mechanical deformation through the measurement of forces and strains (under various loading conditions) and, if possible, simultaneous visualization of the microstructural deformation. Such an integration of experimental techniques is often necessary to gain sufficient insight into the complex deformation (micro-)mechanisms. This calls for a careful design of the experiment, as well as a minimum level of understanding of the various existing deformation tests and microscopes in order to select the appropriate experiment, therefore:

The graduate course on 'experimental engineering mechanics' provides an overview of and introduction to commonly-used experimental deformation and visualization techniques, in which the underlying physical principles will be briefly addressed.

The graduate course will cover lectures by experienced researchers on topics including:

- design of an optimal experiment considering statistical and systematic accuracies and limitations, also in the context of miniaturization of the experiment,
- mechanical deformation tests, including tensile, bending, compression tests, (nano)-indentation, dynamic testing (fatigue, high speed tests), tribological testing (friction, wear),
- microscopic techniques for visualizing deformation, including optical microscopy (different contrast modes), electron microscopy (including EDX and EBSD), and surface profilometry,
- strain field measurement techniques, including digital image correlation (DIC),
- and a short individual lab session (to perform a careful DIC analysis).

Examples from faculty research and literature will be used to illustrate possibilities and restrictions of these techniques.

Lecturers

- prof. Vikram Deshpande (University of Cambridge, United Kingdom):
lecture on 'Experimental Dynamics'
- dr. Benoît Blaysat (Université Blaise Pascal, France):
lecture on 'Digital Image Correlation'
- dr.ir. Matthijn de Rooij (Univ. of Twente):
lecture on 'Experimental Tribology'
- dr.ir. Laurent Warnet (Univ. of Twente):
lecture on 'Design of Experiments'
- dr.ir. Mark van Turnhout (TU/e):
lecture on 'Optical Microscopy'
- dr.ir. Johan Hoefnagels (TU/e):
lectures on 'Electron Microscopy' and 'Miniaturization of Experiments'
-

Organization

The course is organized and hosted by Mechanics of Materials group at the Eindhoven University of Technology (TU/e). The local organizing committee is composed of:

- dr.ir. Johan Hoefnagels (*main organizer*)
- Alice van Litsenburg (*secretary*)

Lecture notes

Lecture notes and course material will be distributed at the start of the course.

Prerequisites

No prior knowledge is required. The course is set up to give an introduction of the various experimental techniques for those new to the field, while giving specific details for the more experienced experimental researcher.

Fee/Registration

The course is free for registered members of the graduate school Engineering Mechanics and for the research members of the contributing research groups. The course fee for non EM members is € 100 for students and € 400 for other participants. They will receive an invoice after accepted registration. Participants need to register by completing the registration form, which can be found at <http://www.em.tue.nl/events/index.php/2/2018> and returning it **before September 3th, 2018** to the Secretariat of the Graduate School Engineering Mechanics, Eindhoven University of Technology. Members of the Graduate School Engineering Mechanics receive priority in case of over-subscription.

Further information

Arrangement of accommodation or dinner is on your own, but for advice one can email to:

- Alice van Litsenburg (secretary); E-mail: A.J.J.T.Litsenburg@tue.nl

For more information on the contents of the course, contact:

- dr.ir. J.P.M. Hoefnagels (TU/e); E-mail: J.P.M.Hoefnagels@tue.nl

Further information about the educational program and other activities of the Graduate School on Engineering Mechanics can be found at: www.em.tue.nl.
